About Quintech:

Quintech Electronics & Communications, Inc. (www.quintechelectronics.com) founded in 1989, is a state-of-the-art designer and manufacturer of RF signal management communications equipment. The company's products are globally distributed and vital for RF signal management. Quintech products are the keystones to the automation of today's advanced telecommunication network infrastructures and test laboratories. Our worldwide customers include satellite, government, wireless telecommunications, broadcast and CATV service providers. Quintech produces RF matrix switches, RF over fiber, redundancy switches, relay switches, splitters, combiners, amplifiers and DC powering products and equipment. The products are available in L-band, broadband, IF and wireless frequencies. These RF signal management products are used for monitor and control, test and measurement, redundancy applications and surveillance. Quintech products are designed for high reliability and maximized uptime providing years of maintenance free service. We emphasize the design and development of superior RF signal management products to provide the highest quality systems and solutions for our valued customers.

RF & L-Band Matrix Routers:

The company designs and manufactures the world's largest configuration matrix switches in the smallest form factor. These are state of the art products that simplify and facilitate RF signal management solutions. Quintech matrices span frequencies from DC to 6 GHz. These superior designs are used worldwide in gateways, teleports, broadcast and cable headends.

RF Test Matrices:

Our customers include wireless service providers, network equipment and component manufacturers. Our products are used for laboratory, R&D and product conformance, interoperability, network load, software regression and manufacturing testing applications which support legacy network compatibility with MIMO, LTE, LTE-U, WiFi, and other mobility testing. We also provide Lab Automation and Management software that facilitates wireless lab testing.

Quintech Electronics & Communications, Inc. sells its products worldwide in over 100 countries.

XTREME 256
256 Port Fan-Out L-Band RF Matrix Switch
XTREME 256

General Description:

The **XTREME 256** next generation L-band matrix switch features 256 ports in a compact 12 RU chassis. The **XTREME 256** is a full fan-out (distributive), non-blocking switch where an input can be routed to any or all outputs. The **XTREME 256** features an industry exclusive flexible matrix architecture (patented) that supports both symmetric and asymmetric configurations of 256 combined inputs and outputs in a single chassis. Asymmetric configurations such as 64x192, 96x160, and more can be implemented as well as the standard 128x128 configuration. It is designed for maximum reliability with redundant and hot-swappable power supplies, fans trays, and control cards plus RF redundancy. It is also designed for ease of maintenance with built-in self-test (BIST) capability and the ability to hot-swap all active components from the front of the unit. The **XTREME 256** is highly scalable and can easily be expanded up to 2048x2048 using multiple **XTREME 256** modules. Optional integrated expansion ports allow for large systems without using external expansion modules, significantly reducing system size and number of cables.

Features & Benefits:

- Compact modular design, 256 ports in 12 RU, easily expandable to 2048x2048
- Asymmetrical configurations up to 248 outputs in a single chassis
- Adjustable gain on inputs and outputs to allow RF performance optimization
- Option for fiber optic inputs
- Easy hot-swap of all active cards, power supplies, and fan trays from the front
- Redundant hot-swap control cards plus independent GUI control system
- Remotely controlled via web browser GUI interface, SNMP, TELNET or TCP/IP via customer supplied PC

Specifications:*[1]	XTREME 256

XTREME 256-C
256 Port Fan-In L-Band RF Matrix Switch

XTREME 256-C

General Description:

The **XTREME 256-C** next generation L-band matrix switch features 256 ports in a compact 12 RU chassis. The **XTREME 256-C** is a full fan-in (combining), non-blocking switch where one or multiple inputs can be routed to an output. The **XTREME 256-C** features an industry exclusive flexible matrix architecture (patented) that supports both symmetric and asymmetric configurations of 256 combined inputs and outputs in a single chassis. Asymmetric configurations such as 192x64, 160x96, and more can be implemented as well as the standard 128x128 configuration. It is designed for maximum reliability with redundant power, fans trays, and control cards plus RF redundancy. It is also designed for ease of maintenance with built-in self-test (BIST) capability and the ability to hot-swap all active components from the front of the unit. XTREME 160
160 Port Fan-Out L-Band RF Matrix Switch

XTREME 160

General Description:

The **XTREME 160** next generation L-band matrix switch features up to 160 ports in a compact 4 RU chassis. The **XTREME 160** is a full fan-out (distributive), non-blocking switch where an input can be routed to any or all outputs. The **XTREME 160** features an industry exclusive flexible matrix architecture (patented) that supports both symmetric and asymmetric configurations of 160 combined inputs and outputs in a single chassis. Asymmetric configurations such as 32x128, 48x80, and more can be implemented as well as the standard 64x64 configuration. Optional 13/18V, 22 kHz tone LNB power is available on all input ports. The **XTREME 160** is designed for maximum reliability with redundant power and control cards.

Features & Benefits:

- 50-200 MHz and 850-2450 MHz
- Compact modular design up to 160 ports in 4 RU chassis
- Asymmetrical configurations up to (48x80, 32x128, 64x96) in a single chassis
- LNB power 750 MA per input 13/18 V with 22 KHz tone
- Fiber optic receivers
- Adjustable gain and attenuation on all inputs and outputs allows the user to adjust the RF level for optimum performance
- Fast and easy hot-swap (less than 30 seconds) of any active cards

Specifications:*[1]	XTREME 160
Configurations:	64x64, 48x80, 80x48, 32x128, 128x32
RF Connectors:	F-Type, BNC 75 Ω or 50 Ω, SMA, Mixed or Optical Input Receivers SC/APC or LC/APC
Impedance:	75 Ω or 50 Ω
Operating Frequency:	50-200 MHz & 850-2450 MHz
Frequency Response:	+/-1.5 dB (950-2150 MHz), +/-2.0 dB (850-2450 MHz) +/-0.5 dB Over Any 36 MHz Channel
Input P1dB:	0 dBm

Input Gain Range:	-23.5 to +8 dB in .5 dB Steps
Output Gain Range:	-23.5 to +8 dB in .5 dB Steps
LNB Power Each Port:	0/13/18 V, 22 kHz Tone
	Individual ports limited to 750 mA
	700 W Total System Power Available to LNB
Optical Wavelength:	900-1650 nm
Optical Return Loss:	14 dB
Optical Connectors:	SC/APC, LC/APC
Local Control:	8.4" Touchscreen Display
Remote Control:	SNMP, TELNET, TCP/IP, Web Browser Interface Via Ethernet
Power Requirements:	100-240 VAC Autoranging, 50/60 Hz
Power Consumption:	165 W Typical
Size:	4 RU: 7"H x 19"W x 23.25 D"

XTREME 80
80 Port Fan-Out L-Band RF Matrix Switch

XTREME 80

General Description:

The **XTREME 80** next generation L-band matrix switch features 80 ports in a compact 2 RU chassis. The **XTREME 80** is a full fan-out (distributive), non-blocking switch where an input can be routed to any or all outputs. The **XTREME 80** features an industry exclusive flexible matrix architecture (patented) that supports both symmetric and asymmetric configurations of 80 combined inputs and outputs in a single chassis. Asymmetric configurations such as 16x64, 24x40, and more can be implemented as well as the standard 32x32 configuration. Optional 13/18V, 22 kHz tone LNB power is available on all input ports. The **XTREME 80** is designed for maximum reliability with redundant power and control cards.

Features & Benefits:

- 50-200 MHz and 850-2450 MHz or 50-1000 MHz frequency range
- Compact modular design up to 80 ports in 2 RU chassis
- Asymmetrical configurations up to (32x32, 16x64, 24x40) in a single chassis
- LNB power 750 mA per input 13/18 V with 22 KHz tone
- Option for fiber optic inputs
- Fiber optic receivers
- Adjustable gain and attenuation on all inputs and outputs allows the user to adjust the RF level for optimum performance
- Fast and easy hot-swap (less than 30 seconds) of any active cards

Specifications:[1]	XTREME 80
Configurations:	16x64, 24x40, 32x32, 40x24, 64x16, 32x48, 20x48, 60x20, 48x32

XTREME 32
32 Port Fan-Out Dual Band + S-Band RF Matrix Switch

XTREME 32

General Description:

The **XTREME 32** Dual Band matrix switch is a full fan-out (distributive) non-blocking signal management solution that routes an input to any or all outputs. The design features an industry exclusive architecture that supports both symmetric and asymmetric configurations of 32 combined inputs and outputs in a compact 1 RU chassis. Hot-swappable redundant power supplies, I/O Modules, and a field replaceable cooling fan provide maximum reliability.

Features & Benefits:

- 50-200 MHz, 850-2500 MHz & 950-3500 MHz operating range
- Flexible matrix configurations (16x16, 4x28, 8x24)
- LNB power 750 mA per Input 13/18 V with 22 kHz tone
- Option for fiber optic inputs

- Adjustable input and output gain
- Redundant hot-swappable power supplies
- Hot-swappable input and output adapters
- Dual gigabit ethernet ports

XTREME 32
Dual 8x8 Hybrid RF Matrix Switch

XTREME 32

General Description:

The **XTREME 32** Hybrid matrix switch is an L-band matrix switch that features a non-blocking 8x8 splitting matrix and a non-blocking 8x8 combining matrix with hot-swap I/O cards, redundant power supplies, and control module in a compact 1 RU chassis. Dual 10/100/1000 Ethernet ports allow for redundant control connections.

Features & Benefits:

- 850-2500 MHz operating range
- Redundant hot-swappable power supplies
- Hot-swappable input and output adapters
- Adjustable input and output gain

- Dual gigabit ethernet ports
- Field replaceable cooling fan
- Fan-out LNB power option on input adapters
- Option for fiber optic inputs

XTREME 32
32 Port Fan-Out Bi-Directional RF Matrix Switch

XTREME 32

General Description:
The **XTREME 32** DOCSIS 3.1 compatible matrix switch is a full fan-out (distributive) non-blocking signal management solution that routes an input to any or all outputs. The design features an industry exclusive architecture that supports both symmetric and asymmetric configurations of 32 combined inputs and outputs in a compact 1 RU chassis. Hot-swappable redundant power supplies, I/O Modules, and a field replaceable cooling fan provide maximum reliability.

Features & Benefits:

- 5-1800 MHz operating range
- Bidirectional configuration ideal for DOCSIS 3.1 testing
- Redundant hot-swappable power supplies
- Option for fiber optic inputs

- Hot-swappable input and output adapters
- Dual gigabit ethernet ports
- Field replaceable cooling fan

XTREME RP1

Modular 1RU Chassis
w/LNB Power Insertion and Redundancy Switch Cards

RP1

General Description:

The RP1 1RU modular chassis provides centralized power control and signal redundancy options. Hot-Swappable redundant power supplies, I/O Modules, and a field replaceable cooling fan provide maximum reliability. Eight card slots provide combinations of up to 16 Bias-T DC Power Inserters, eight 2x1 RF sensing and LNB power redundancy switch with Q-SENSE©, or 16 quick disconnect switchable DC power outputs. Remote control is available via web browser GUI, SNMP, or Quintech API protocol over TCP/IP.

Features & Benefits:

- 700-3000 MHz operating range
- Eight hot-swappable card slots with flexible configurations
- LNB status monitoring
- 10 MHz reference distribution to all slots
- Redundant hot swappable power supplies
- Field replaceable cooling fan

Dual LNB Bias-T Card Specifications:

RFM
RF Routing Switches

RFM

General Description:

The **RFM** is a routing switch that transparently passes RF signals. Quintech's proprietary design provides lossless switching while minimizing noise figure through the switch. It's compact design fits 16x1 in a 1 RU chassis and the switches can be cascaded to expand to 256x1. The **RFM** is used for centralized test and measurement applications and monitoring large numbers of RF signals.

Features & Benefits:
- 5-1800 MHz continuous frequency range covering all DOCSIS 3.1 to 1200 MHz and to future 1800 MHz frequencies
- L-band 950-2150 MHz frequency range
- Unity gain switching with low noise figure
- Pay as you grow, expandable in the field to 256x1
- Remote control over TCP/IP via open source API
- Web browser interface for easy setup and configuration

Applications:
- Remote testing of CATV headends and monitoring of upstream and downstream paths
- Automate testing of multiple devices under test to shared analyzer

NEXUS Wi-5G
6 GHz RF Test Matrix

NEXUS Wi-5G

General Description:

The **NEXUS Wi-5G** is a wideband 600 MHz to 6 GHz bi-directional RF attenuator matrix test system which enables automated testing of 2x2 to 8x8 MIMO connections. 64 sets of integrated fixed attenuators and 0 to 60 dB programmable attenuators provide up to 90 dB of total attenuation per connection. The **NEXUS Wi-5G** can connect any input port to one or all output ports and any output port to one or all input ports using integrated wideband splitters and combiners. Unused connections can be turned off using internally terminated 100 dB isolation switches. The **NEXUS Wi-5G** enables interoperability, coexistence and testing of current and emerging standards. The matrix is used for roaming, handover, beam forming, wireless mesh network test and validation of network equipment. Its frequency range covers 4G/LTE 5G Wireless and WiFi 6. Circuit-switched fallback testing can be conducted in a controlled environment isolated from commercial signals, emulation of mobility scenarios, interband carrier aggregation and WiFi interference tests are easily configured. Regression testing can be completed in reduced time enhancing laboratory ROI.

The **NEXUS Wi-5G** used in conjunction with Quintech's proprietary **Q-LAAMP**® software management platform provides a ready-to-use test system with an intuitive GUI and user configurable RF fading applications.

Features & Benefits:
- 600 MHz to 6 GHz continuous frequency range covering all major wireless and technologies
- 64 Total 0 to 60 dB programmable attenuators in 0.5 dB steps
- High power handling up to 30 dBm
- Integrated splitters and combiners support 2x2 up to 8x8 MIMO connection testing

Specifications:*	NEXUS Wi-5G
Configuration:	4x8, 8x8
RF Connectors:	N-type, SMA, QMA, TNC, 4.3-10

NEXUS-4
6 GHz Bi-Directional RF Attenuator Matrix Switch

NEXUS-4

General Description:

The **NEXUS-4** is a bi-directional fully non-blocking 32x32 RF matrix switching system that can route any input ports to any output ports in a 6 RU chassis. With the frequency range of 400 MHz to 6 GHz and the capability of expanding to 64x64, it enables large scale wireless testing that involves many MIMO base stations and devices. The built-in programmable attenuators and efficient automation interface provide ease-of-use testing of signal fade and emulation of mobility scenarios. It can dramatically increase lab efficiency by eliminating manual patch panel and cabling as it can be remotely reconfigured for different test setups consistently in seconds. The utilization of **NEXUS-4** RF matrices will expand your testing capabilities, improve ROI of lab instruments, and reduce time to market.

Features & Benefits:

- 400 to 6000 MHz frequency range covering all major wireless technologies
- Support 32x32 RF ports in 6 RU with modular design expandable to 64x64
- Solid state switching and attenuation for consistent, repeatable and glitchless performance; reconfigure any test setup in seconds
- Fully non-blocking splitting and combining that supports MIMO testing
- Emulate free space incremental path loss of 0 to 60 dB in 0.5 dB steps
- High power handling of up to 30 dBm (1w)
- Management software **Q-LAAMP** enables resource and time allocation for high lab efficiency

NEXUS-M
6 GHz Bi-Directional RF Mesh Attenuator Matrix

NEXUS Wi-5G

NEXUS-4

### General Description:

The **NEXUS-M** is a bi-directional 32 port mesh attenuator matrix where any port can connect to any or all remaining ports. With wideband frequency range spanning 400 MHz to 6 GHz, the matrix can be used for automating UHF, LTE, Bluetooth, WiFi, CAT-M, NB-IoT, and GPS component and software application tests. Each connection has an independently controlled variable attenuator, allowing power levels to be controlled between nodes. With millisecond switching speeds, software and firmware regression tests can be performed over many network configurations in a much shorter time compared to manual configuration of a patch panel. Easily configure string and mesh constellation networks for beam hopping latency measurements and network resiliency when adding or dropping nodes in software defined networks. The utilization of **NEXUS-M** RF mesh matrices will help reduce time to market of new hardware and software, and improve firmware compliance tests.

Features & Benefits:

- 400-6000 MHz frequency range covering all major wireless technologies
- Available in 8, 16 or 32 port systems
- Solid state switching and attenuation for consistent and repeatable performance
- Emulate over-the-air incremental path loss
- **Q-LAAMP** management software enables resource and time allocation for lab operation efficiency
Specifications:*	NEXUS-M
Configuration:	8, 16, 32 Port Systems
RF Connectors:	N(f), SMA(f)
Impedance:	50 Ω
Operating Frequency:	400-6000 MHz
Matrix Type:	Passive Bi-directional
Switching Technology:	Solid State

NEXUS-R
High Power Bi-Directional RF Blocking Matrix

NEXUS-R

General Description:

The **NEXUS-R** is a passive bi-directional blocking matrix switch that can relay 32 A ports to 32 B ports. It is designed to handle high power up to 50 W for direct connection to base stations. Based on latching relay switching technology, it retains the connections even upon power loss. Quintech's proprietary design minimizes the return signal and insertion loss through the switch while maximizing the isolation between ports. Its low loss and distortion preserves signal integrity for performance testing while the high isolation prevents crosstalk between test equipment. As a result, the **NEXUS-R** has superior RF performance and can be used in highly demanding applications such as base station beam forming testing.

Features & Benefits:

- Latching relays ensure cross points remain connected upon loss of power
- All active components, including RF matrix cards and power supply, are field replaceable
- Multiple modules can be combined to create larger matrices

Specifications:*	NEXUS-R
Operating Frequency:	DC – 2.8 GHz
Connector Type:	N-Type
Matrix Type:	Passive Bi-directional Blocking
Switching Technology:	Miniature RF Relay
Impedance:	50 Ω
Maximum Input RF Power:	50 W (47 dBm) at 2.5 GHz, 20C
Maximum Hot Switch RF Power:	10 W (40 dBm) at 2.5 GHz, 20C
Total RF Power into 32 Channels:	150 W CW, 20C
Amplitude Matched Channel-to-Channel:	±1 dB Max. @ 2.8 GHz
Isolation (Any Configuration):	90 dB Min.
Insertion Loss:	11 dB Max. @ 2.8 GHz
Return Loss:	14 dB Typ., 10 dB Min.
Switching Speed:	<30 Millisecond/Crosspoint
Switch Cycles to EOL:	>10^6 (1 Million)
Power Requirements:	100-240 VAC Autoranging, 50/60 Hz
Power Consumption:	<100 W
Local Control:	Front Panel Keypad with LCD Display
Remote Control:	Ethernet Port; TELNET or TCP/IP Via Customer Supplied Control System, XR Bus for Expansion
Software:	Embedded Web Browser Interface
Size:	12 RU: 21" H x 19" W x 25.25" D Including Rear Handles
Mounting:	Handles and Rack Mounts Attached to Front or Rear of Box
Weight:	190 lbs Gross (Boxed), 107 lbs Net

Q-LAAMP
Quintech Lab Automation and Management Package

**Base Stations**   *NEXUS* Matrices   **Isolation Rooms**

General Description:

Quintech Electronics proprietary Laboratory Automation and Management Package, **Q-LAAMP**, provides lab managers the ability to manage and allocate resources such as base stations and RF instruments among many shared users. Using the **NEXUS** RF Matrix, this software manages resource allocation to labs and users without a patch panel and manual operations. Its web-based user interface provides easy access from any PC or tablet browser. **Q-LAAMP** also includes other intuitive features that facilitate testing, monitoring and troubleshooting.

Q-LAAMP makes lab management and resource sharing easy and significantly increases lab efficiency, reduce test time and save costs.

Features & Benefits:

- Schedule and resource management
- Enables multiple users to share the same lab environment
- Shared resources can be independently allocated
- Secure remote control and access to **Q-LAAMP** to avoid unauthorized changes
- Color-coded port level monitoring allows quick troubleshooting
- Port labeling to avoid confusion in a multi-user changing lab environment

QS/QC Series Signal Distribution
Extended L-Band Splitters & Combiners

QS/QC

General Description:
The **QS/QC Series** product line builds upon the well-known and proven Quintech **LS** and **LC** products. The **QS/QC Series** brings Quintech's excellent flatness and linearity to the extended L-band frequency range and provides adjustable LNB power options to meet all of your signal distribution needs now and in the future.

Features & Benefits:
- 50Ω 950-4000 MHz or 75Ω 850-3000 MHz Operating Range
- Multiple configurations available in a 1RU Enclosure
- 1X4 (single, dual, quad),1X8 (single dual), 1X16 (single, dual), 1x32 (single)

General Description:
The **LS 2150** series of active L-band (950-2150 MHz) splitters permit simple splitting of RF signals to multiple destinations. Configurations available from 4 to 64 ports, including dual and quad units. A variety of powering options and features are available. Active units will power LNBs. The active splitters are DC blocked on all outputs.

Features & Benefits:
- Convenient, centralized rack mount designs improve cable management
- Microstrip design provides better performance and reliability
- Larger configurations eliminate cascading for better performance
- Active (zero loss) splitters allow for ease in RF design
- Greatly improves cable management by allowing for easy access to cable routing and easing identification of cabling
- Reduces cable connector failures by eliminating the need for frequent manual connects/disconnects

AMP 2150
L-Band Line Amplifier

AMP 2150

AMP 2150 Dual L-Band Line Amplifier

AMP 2150/4 Quad L-Band Line Amplifier

AMP 2150 Inline

General Description:

The **AMP 2150** series of L-band line amplifiers provide high gain as well as optional DC path continuity. These amplifiers are manufactured utilizing highly reliable surface mount technology and advanced microstrip RF circuitry and are typically deployed in satellite telecommunication networks to compensate for L-band signal paths through long coaxial cable runs. Housed in either a standard 1 RU rack mount enclosure or a rugged weatherproof extruded housing, the **AMP 2150** series amplifiers are the optimum choice for any L-band satellite communications application.

Features & Benefits:

- High (adjustable) gain over full bandwidth
- Housed in a rugged, weatherproof extruded aluminum enclosure or in a 1 RU rack mount chassis
- Passes a 10 MHz reference signal
- LNB power available

7800FR

General Description:
The award winning Evertz 7800 family of multiframes provide flexibility in the truest form. With simultaneous processing capability of RF, Fiber, ASI, IP, 3G, HD/SD and more, these frames are designed to grow with the rapid changing needs of the facility and are available in a wide variety to defined below.

Standard features of all 7800series multiframes include dual frame genlock providing stable reference signal across the internal bus to all installed modules which minimizes the cost spent on genlock distribution, global frame status alarming to provide quick alert to operations in the event of a failure, and interchangeable modules between all frames (both processing module and companion rear plate)
Features & Benefits:
* 7800FR(-QT) houses up to 15 processing modules in 3RU
* 7801FR houses up to 4 processing modules in 1RU
* Dual frame genlock for internal reference distribution
* Front extractable modules, power supplies and fans
* AC, DC and Hybrid AC/DC power supply configurations available
* Auto-ranging power supplies operating between 100V-240V AC and 36V-60V DC
* Backwards compatible with Evertz 7800/7700 series modules
* Frame status contact contact closure alarm in event of failure

## Rack-Based Modules

7807LT-2 7807LR-2 7708LT 7708LR

- Single channel and dual channel Transmit and Receive modules are available in a single slot. hot-swappable form factor. Evertz RF over Fiber modules offer very flat frequency response of +/-1.SdB (worst case) resulting in linear performance and better CNR.
- Standard Tx & Rx models offer an optical budget of 16dBm for up to 45km transport. For applications with limited fiber or longer distance transport. these modules are available in coarse wavelength division multiplexing and dense wavelength division multiplexing options for transport over 100km.
- EDFA options are also available.

- Features
- Full remote monitoring & control via network monitoring service
- 13/lBV + 22kHz LNB powering
- Full power RF output per RF port for monitoring or distribution
- RF connectors available with BNC 50 or 75Ohm, F-Type, SMA
- -10 to 50 dB of manual and automatic gain control (AGC) in l dB step
- Fiber connectors available with SC or FC connectors and UPC or APC finish
- Dense wavelength division multiplexing options available for multiplexing up to 96 RF signals over a single fiber

QUINTECH®
The Source for RF Reliability

The 7708LT is a fiber optic transmitter for RF signals in the extended L–Band or wider frequency range. It accepts a single RF input on coaxial cable and provides a single output for optical transmission. An RF monitor output provides a convenient means of obtaining peak satellite signal strength, or additional signal distribution.

Gain may be adjusted manually or managed automatically via AGC. With SmartMON™, incoming RF signal strength, LNB current and other data are relayed over the fiber output for monitoring through SNMP/VistaLINK® (requires SmartMON™ capable companion fiber receiver) 13/18V DC adjustable LNB power with 22kHz tone is also provided.

▶Features & Benefits

- Extended frequency response for extended L–Band, off–air DTV, and other signals
- Protocol independent design — transports all modulation formats
- LNB power with selectable 13/18V DC
- LNB current limit and short circuit protection
- LNB current monitoring for advance warning of LNB failure
- 22kHz tone on/off for LNB local oscillator control
- RF monitor output for signal peaking and signal distribution
- Manual gain and AGC modes
- Wide range adjustable gain in 0.5dB steps for fine tuning signal levels and optimizing CNR
- Available with 1310nm, CWDM (ITU–T G.694.2) and +11dBm high power DWDM (ITU–T G.694.1) laser options

- SmartMON™ capability provides remote status monitoring via SNMP without a separate data connection
- VistaLINK® capability is available for monitoring and control when modules are used in a 3RU 350FR, 7800FR frame and a 7700FC VistaLINK® frame controller is installed in Slot 1 of the frame
- Fiber link provides electrical isolation between antenna and facility, mitigating ground loop and lightning issues
- The 7708LT occupies one card slot and can be housed in a 1RU frame that will hold up to 3x modules, a 3RU frame that will hold up to 15x modules, a 350FR which will hold up to 7x modules or a standalone enclosure, which holds one module

7882IRD Series
DVBS/S/S2X MPEG–2/H.264 SD/HD Integrated Receiver Decoders

The 7882IRD Series is the basis of a professional platform for receiving, demodulating and decoding digital DVB–S/S2/S2X satellite signals. With a compact, modular form–factor the 7882IRD represents one of the highest density and most flexible solutions in the industry. The 7882IRD–S2X may be mounted in Evertz' 7800 series enclosures, providing a high–density, modular solution. Options for an innovative removable front control panel and 1RU chassis also allow the IRD to be packaged in the traditional IRD form factor, while maintaining all of the benefits of modularity.
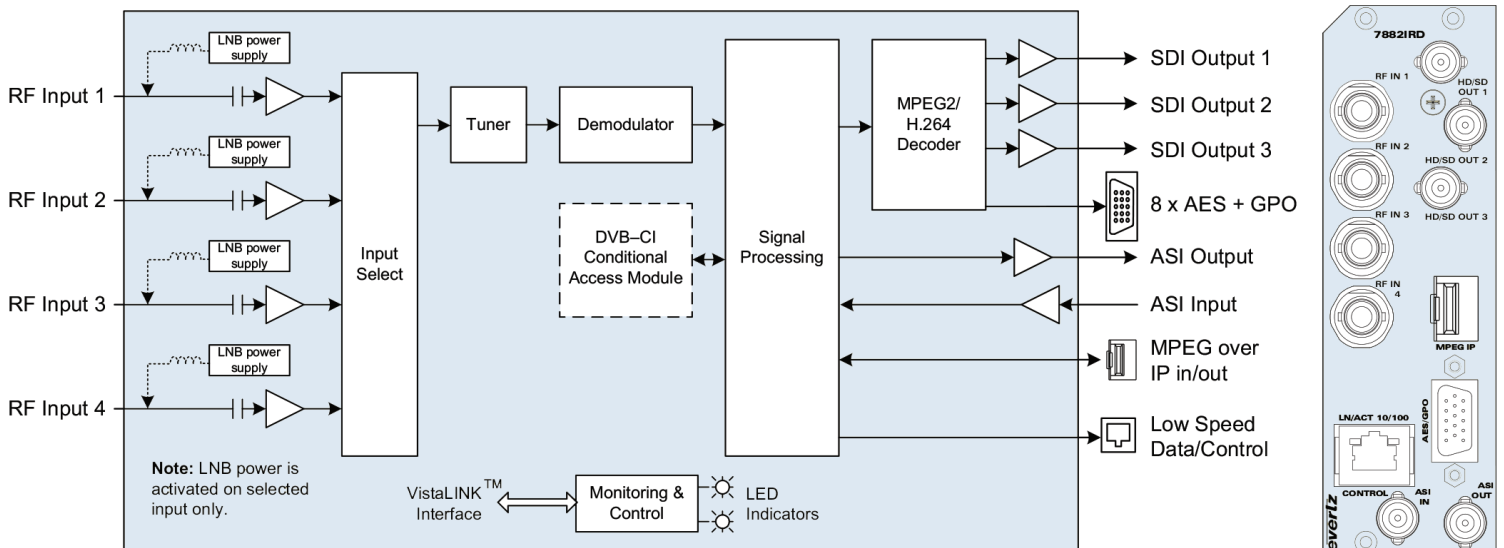

Applications include signal reception for broadcasters, cable, DTH and IPTV providers, or any other small to large head–end operators who need to receive and utilize or re–distribute satellite content. The 7882IRD series provides ASI and IP outputs, ideal for turnaround, transcoding, monitoring or other applications where the received signal remains in the compressed domain. For baseband output, the 7882IRD2 utilizes an advanced decoder with support for both MPEG–2 and H.264/AVC, SD or HD encoded signals, optionally up to 4:2:2 10–bit.

In addition to a quad–RF input, the 7882IRD also provides inputs for IP and ASI signals, making it a future–proof, universal reception platform for signals delivered over satellite, fiber and other network media. Monitoring parameters such as EsNo ratio, RF power, BER and packet errors present a convenient solution for broadcasters and cable companies who wish to not only receive, but also remotely monitor signal quality. Also, these parameters as well as Full monitoring and control of the IRD are relayed over SNMP, for convenient remote access using Evertz own VistaLINK® PRO SNMP monitoring and control package. Additionally, low–speed data support is provided for in–band control.

For applications requiring decryption, the IRD provides a slot for installation of a customer supplied conditional access module. DVB–CI compliant conditional access modules and formats are supported.

▶**Features & Benefits**

- Modular design, allowing flexible configurations along with easy system reconfiguration and service
- May be mounted in the 7800FR series frames in high–density applications
- May be mounted in the 7801FR and fitted with the 7801CP control panel, yielding a 1RU 7882IRD with removable front control panel and optional redundant power supplies, all of which are hot–swappable and may be serviced without any de–cabling required
- Up to two units may be mounted in the 7801FR and used with the 7801CP, providing a dual–IRD solution in 1RU
- Future–proof with upgrade paths to support future modulation and encoding technologies
- Standard support for advanced modulation schemes, including DVB–S2 with 16APSK, 32APSK and 64APSK
- Optional DVB–S2X Modulation support
- Standard support for advanced transport stream processing including service filtering and output bitrate control
- Long frames and Short frames
- CCM, VCM and ACM
- SCPC and MCPC support
- Automatic detection and configuration of modulation type, filter roll–off, symbol rate, pilot presence (on/off) and frame length
- Supports optional on–board Input auto–failover between various inputs including RF/ASI or IP inputs

- Flexible decoding of SD and HD as standard
- Support for encoding profiles from distribution to contribution grade, including H.264 in 4:2:0 8–bit and optional 4:2:2 10–bit formats "software upgradable", along with legacy MPEG–2
- Available DVB–CI slot for conditional access modules
- Available BISS and BISS–E decryption
- Flexible mid–stage access to compressed domain signals, including ASI and optional IP output along with ASI and optional IP inputs
- Straight pass through or PID filtering/remapping of compressed stream outputs
- Standard Dolby® pass through and decode of Dolby® AC3 and MPEG–2 Layer 1 audio
- Optional decoding of Dolby® E, Dolby® Plus and AAC
- Eight AES outputs
- Optional Audio Video Monitoring (AVM option) for audio mute and video freeze and black detection
- Optional SCTE 105/34 translation
- Control through web–browser or SNMP using third–party application or Evertz' own VistaLINK® SNMP control and monitoring software
- Ability to store ten preset configurations
- Event log support with exporting capabilities are supported on VLPRO and built–in Control port for direct control and management of the IRD

Evertz 2400 ODU
Outdoor Integrated RF Fiber Transmission System

2400 ODU

General Description:
The 2400ODU-8 is a compact, weatherproof enclosure that provides a convenient, pre-integrated package for fiber transport of satellite and other signals within the extended L-Band range. The 2400ODU-8 can house up to 8x active fiber transmit (2408LT) or receive (2406LR) modules and an 8-channel power supply (2400PSUA-8).

The 2400ODU comes with mounting brackets to be conveniently mounted directly on or near the antenna structure.

This turnkey solution provides fiber transport of up to 8x RF signals over individual fibers or multiplexed over a single fiber, and power the connected LNBs.

The 2400ODU-8 also features built-in surge protectors for lightning protection and has options for integrated fiber multiplexer, 10MHz reference transport, RF protection switching, splitters, Bias-Tee and more.

Features & Benefits:
- Fiber link provides electrical isolation between antenna and facility, mitigating ground loop and lightning issues
- Weather–sealed enclosure with durable powder coat finish
- Wide operating temperature range
- Lightning protection included on RF inputs/outputs
- LNB current monitoring for advance warning of LNB failure
- Serial and Ethernet data transceivers available for remote antenna control, monitoring and other applications
- All modules are field–replaceable and hot–swappable
- SmartMON™ monitoring without a separate data connection
- Redundant power supply

| Chassis Specifications:*	Evertz 2400 ODU
Slots:	8
Channels (max):	8
Power Consumption:	<1 Amp Per Input
Size:	9" D x 16" W x 16" H
Weight (chassis only):	11 lbs
Environment:	-30 to +80°C

*Specifications may vary with connector type. See individual specification sheet for specific performance data.

7780D4A-ASI
Quad ASI TDM-Demux

▶ Features & Benefits

- Single card TDM demultiplexer for four DVB-ASI transport streams
- Adjacent outputs unaffected by loss of any DVB-ASI input feed at the 7780M4-ASI TDM Mux
- Fully hot-swappable from front of frame
- Monitor port output is user-selectable from the four ASI outputs
- Comprehensive signal and card status monitoring via four digit card edge display or remotely through SNMP and VistaLINK®

- VistaLINK® capability is available when modules are used with the 3RU 7700FR-C frame and a 7700FC VistaLINK® Frame Controller module in slot 1 of the frame
- Occupies one card slot & can be housed in a standalone frame, a 1RU frame holding up to 3 modules or a 3RU frame holding up to 15 modules

▶ Specifications

Serial Input:

Standard:	SMPTE ST 259-C compliant TDM stream as provided by companion 7780M4-ASI
Number of inputs:	1
Connector:	BNC per IEC 61169-8 Annex A
Signal Level:	800mV nominal
Equalization:	Automatic to 250m @ 270Mb/s with Belden 8281 or equivalent cable
Return Loss:	> 15dB up to 270Mb/s

Serial ASI Outputs:

Standard:	DVB-ASI: DVB TR 101 891-270
Number of Outputs:	4 independent DVB-ASI
Monitor Output:	1 output, selectable from outputs 1-4
Connector:	BNC per IEC 61169-8 Annex A
Signal Level:	800mV nominal
DC Offset:	0V ±0.5V
Rise and Fall Time:	900ps nominal
Overshoot:	< 10% of amplitude
Return Loss:	> 15dB up to 270Mb/s
Wide Band Jitter:	< 0.2 UI
